

INCUBA Science Park - Gustav Wieds Vej

Situated at Gustav Wieds Vej, this location - the eldest growth -and knowledge environment of the INCUBA science Park family - houses a diversity of knowledge-intensive, high-technological and innovative growth companies - in particular within the fields of biotechnology and IT. Here we find several of the University of Aarhus' molecular biologists at work; and the place is also the domicile of e.g. Seed Capital, a patent agency and a GTS Institute.

Due to its proximity to the University of Aarhus, the Gustav Wieds Vej division has, over the years, become a central address for new knowledge-intensive businesses. A number of the companies have grown up very successfully and thus moved into domiciles of their own.

At Gustav Wieds Vej, INCUBA Science Park has 11,500 square metres of mixed office and laboratory facilities at its disposal.

How many square metres of the two types of premises you rent will depend on your requirements. For a presentation of the scope and prices of the facilities, please contact:
